Onedrive for mac sync issues

See this article from the Microsoft Web site. If you can't sync files between your computer and OneDrive, it may be due to a problem with the OneDrive desktop sync app. This article is for OneDrive on Mac. Windows 8.1 or Windows RT 8.1 | Windows 10, Windows 7, or Windows Vista First, try these simple steps before trying the steps later in this article, it is worth checking a few things. Check your internet connection - it's basic, but true. Your Internet connection may be disconnected and you may need to connect for OneDrive to sync. Make sure your Mac is able to connect to the Internet correctly. Reduce the size of files that exceed the limit - Compress or resize the file to less than 10 GB and try again. If you are adding a OneNote notebook, make sure that each section is less than 1 GB. Make sure you have permissions to the file or folder you tried to add - Open the file or folder and verify that you have permission to save a copy of it. If you are deding with the display of files on your network, contact your network administrator. Check files or folders with the same name in the same location - This can happen if you upload files to the OneDrive website at the same time, or if you make changes to the OneDrive folder on another PC that is synchronized at the same time. Rename the file or folder, and then add it again. If none of these quicksteps worked for you, you can try the steps below. You can try other steps to restart OneDrive for Mac by restarting the connection to the OneDrive service: Click the OneDrive icon in the menu bar. Click Exit OneDrive. Use spotlights to search for and open OneDrive. Update the OneDrive sync app for Mac Open the Mac App Store. Select the Update button on the toolbar. If an update is available in the OneDrive app, you're displayed. Or open the OneDrive app and see if the update button appears on the app itself. Make sure the OneDrive process is running To make sure OneDrive is running, look for the OneDrive icon to the right of the menu bar. Alternatively, you can check from Activity Monitor: Startup Activity Monitor by pressing the command and spacebar keys and entering the Activity Monitor. Select the CPU tab, and then review the OneDrive Processes column. The file path should not be too long: C:\Users\<UserName>>Picture\Save\2014\January\Holiday\New Year\Family.The entire path, including the file name, must have fewer than 255 characters. In OneDrive, shorten the name of the file name or subfolder, or select a subfolder that is close to the top-level folder. When the file path is shortened, start OneDrive again. (Use spotlights to search for and open OneDrive.) Uninstall the app Uninstall and reinstall the OneDrive app to remove the app's settings. For apps downloaded from the Mac App Store: Click the Launchpad icon in the Dock, and then press and hold the app icon until all icons start jiggling. </UserName>>Click the delete app button. If the icon doesn't have a delete button, you can't uninstall it on the launchpad. After uninstalling, you can reinstall the app from the Mac App Store. If you're d like to see files not syncing correctly, see the Microsoft troubleshooting guide. Resolve onedrive synchronization issues Select whether you're using Windows or Mac, and continue with the troubleshooting guide to understand the problem. If the problem is not resolved, contact support. Tip: The OneDrive version included with Office 365 Plus is OneDrive for business. Related article: Can I find more information about using OneDrive when I try to install Office? Step 4: If OneDrive isn't running, be sure to start it. Check your Internet connection OneDrive allows you to use sync folders when the Internet is off, but the service won't sync until you're back online. To resolve this, turn on Wi-Fi and make sure it's connected to the correct router. The best way to check if your internet is working is to open a web browser and start using it. If you don't have a connection, you're alerted instead of the web page you opened. In this case, restart the router or contact your service provider. A simple reset of the service that restarts OneDrive may resolve important synchronization issues. Follow these steps to find OneDrive in oneDrive.Step 1: Menu Bar. Step 2: Find help and settings and exit the service. Step 3: Log in items > Go to users and groups and tap the + icon. Step 4: Select OneDrive from the application menu. Then, each time you start your Mac, the OneDrive service runs in startup. Buy or Remove OneDrive storage has only 5 GB of storage. Filling space with files, media, and documents is fairly easy. If you're hovering around storage that consumes 5 GB of storage on OneDrive, you can buy more storage or delete irrelevant files to create new storage. You can subscribe to the Microsoft 365 plan that comes with 1 TB of OneDrive storage at any time. Remove download limitsRateOneDrive allows you to set download limit rates on Your Mac. If you've used that option in the past and forgotten about it, it's time to undo it. Follow these steps: Step 1: Find and tap OneDrive in the menu bar. Step 2: Go to Help and Settings and open Your Environment. Click here to see our one-drive article page Next: Read the post below to learn how to manage OneDrive storage like a pro. The content remains fair and authentic. Read the content on the next page In response to Arizona Don november 14, 2020 5:02 AM OneDrive has confirmed whether it is a 64-bit app for 32-bit apps. I don't use OneDrive and have zero knowledge about it. For 32-bitIt does not work. Both Catalina and Big Sur don't support 32-bit apps. I don't get a 32-bit warning. Don November 14, 2020 AM Reply Helpful Thread Reply - In response to Arizona Don November 14, 2020 5:03 AM What version are you using in response to Arizona Don Microsoft Office? I'm using Microsoft 365 and it works. Also tried to restart in safe mode already?November 14, 2020 AM Reply useful (1) Thread reply - More options November 14, 2020 5:07 mulberry58 In response I am Office Student 2019. I have not tried Safe Mode? One thread reply - in response to Arizona Don, more options November 14, 2020 7:59 In response to Arizona Don, it works for me using the version of OneDrive available in the App Store (version 20.169.0823). November 14, 2020 7:59 AM Reply Helpful thread reply - In response to xxMikeBxx, more options November 14, 2020 10:40 AM xxMikeBxx, I didn't even know it was in the App Store. It comes with my office installation. I simply downloaded from the Microsoft site when I had a problem. It should not be prepared for Big Sur. One from the App Store works perfectly. Thanks for your help. Don November 14, 2020 AM Reply Helpful thread reply - More options in response to Arizona Don November 15, 2020 11:20 pm There is the same issue with Microsoft 365 in response to Arizona Don. Installed and uninstalled many times, it seems to work a little, then stop.. I hope the problem will be resolved soon. November 15, 2020 11:20 PM Reply Helpful thread replies - More options in response to Arizona Don November 17,2020 9:08 AM Here in Arizona corresponding to the same - Installation Big Sur and Onedrive stopped syncing - Usually even one drive and sync Sharepoint server - this also doesn't work. Removed and reinstalled - no solution - first I told me I was already syncing and then it is not synced at all so I can finally log in. 2020 2:52 Responding to Loohner 18 in response to 2020 2:52 AM Reply helpful thread reply - More options In response to Loohner November 18, 2 020 3:05 Depending on M Hlohner, I changed the MS update channel option to beta and only downloaded/installed the latest version of onedrive (20201.1005.0007) and it seems to work now. It's in beta and I think this will come soon as a preview or release, but for me it's fine now. November 18, 2020 3:05 AM Reply Helpful thread replies - More options in response to Tob99 November 18, 2020 10:55 AM Tob99 To change the update channel?November 18, 2020 10:55 AM Reply of a helpful thread - MoreOn November 18, 2020, at 12:18 p.m., open the MS Auto-Update app through Spotlight in response to Dcapp3, or open an app like Outlook, open an app such as Outlook, and then click Check for Updates > It takes a bit of time to process on the backend. You can reopen the Auto Updates app and check for updates manually. November 18, 2020 12:18 PM Reply helpful thread reply - In response to more options seattlematt76 November 19, 2020 6:58 am Seattle Mat 76 I have my MSO app installed from the App Store with cruel jokes and those menus you mentioned are not available. I wipe and MS. November 19, 2020 6:58 AMA reply install from helpful thread reply - more optional options
